Richards Middle School 2024 Summer Math Packet for Rising 6th Grade Students

Directions:

You MUST SHOW ALL WORK in order to receive credit.

No work shown will earn you a grade of zero.

<u>Neatly</u> show your work and circle your answers. If there is not enough room to show your work in the box, use notebook paper front and back. Neatly organize and number your problems. Circle your answers!

Important: Start with problem #1, and do all odd-numbered problems (1, 3, 5, 7... 99), for a total of 50 questions.

For extra credit, you may do the even-numbered problems too.

Due Date:

Friday, August 16, 2024

No late work will be accepted. You can turn in your Math packet early. Start off your 6th grade year right... get this done and turned in on time!

FAQ:

Will these be graded?

Yes, these packets will be graded. Do your best. In addition, you will be tested over all the material on the Summer Math Packet.

What if I don't know how to something?

Read through the notes/examples on the front of each page before you do the problems on the back. You may also get help from others if you need it.

What do you mean by "help"?

Help means help, not copying answers from a friend, website or app.

Why do we have to do a Summer math packet?

Because it is an excellent review of 5^{th} grade math concepts, and great preparation for 6^{th} grade.

What if I don't do this packet?

You will get a zero. Zeros are bad. Do your packet.

Multiplying Whole Numbers

- 1. Write the problem vertically
- 2. Multiply the ones digit of the bottom number by each of the digits in the top number, right to left
- Bring down a zero and then multiply the tens digit of the bottom number by each digit in the top number, right to left
- 4. Bring down two zeros and repeat with the hundreds digit of the bottom number
- 5. Add up all of the products

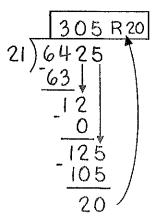

ex: 3,481 x 142

x 3,481 142 6962 + 139240 348100 494,302

Dividing Whole Numbers

- Write out the long division problem with the first number (dividend) underneath the division symbol and the second number (divisor) to the left of the division symbol
- 2. Divide the divisor into the smallest part of the dividend it can go into and write the number of times it can go in on top of the division symbol
- 3. Multiply the number on top by the divisor and write the product under the number you divided into in step 2
- 4. Subtract your product from the number above it
- 5. Bring down the next digit of the dividend
- 6. Repeat steps 2-5 until there is nothing left to bring down.
- 7. If your last subtraction answer is not zero, write the remainder on top

ex: 6,425 ÷ 21

Find each product. Show your work.

i. 238 x 5	2. 832 x 156	3. 4,899 x 67	4. 756 x 300	
	·			
			NAME OF THE PROPERTY OF THE PR	
5. 19 x 863	6. 188 x 732	7. 3,249 x 173	8. 609 x 840	
			- Amilia - a	

Find each quotient. Show your work.

9. 876 ÷ 2	10. 9,473 ÷ 5	II. 396 ÷ 24	12. 8,911 ÷ 45
13. 700 ÷ 12	14. 1,065 ÷ 15	15. 2,737 ÷ 305	16. 4,516 ÷ 22
			-

Solve each problem, showing all work.

18. Sarah and her 3 friends split a bag of candy evenly. They each ate 13 pieces of candy and there were 2 pieces leftover. How many pieces of candy were originally in the bag?

Rounding with Whole Numbers & Decimals

					errorro-como	e de la companya de
ten-thousands	thousands	suel	sauo	tenths	hundredths	thousandths

- 1. Keep all digits to the left of the place you are rounding the same
- 2. If the digit to the right of the rounding digit is less than 5, keep the rounding digit the same. If it's 5 or greater, increase the rounding digit by 1.
- 3. Change all places to the right of the digit you are rounding to 0. (Trailing zeros after the decimal are unnecessary)

ex: round 52.943 to the nearest tenth

less than 5, so the 4 stays

don't need trailing zeros after the decimal

52.9

Word Form & Expanded Form

- 1. <u>Word Form</u>: write the whole number in word form, translate the decimal to "and", & write the decimal as if it were a whole number, followed by the name of the place of the last digit
- 2. <u>Expanded Form</u>: write the value of each nonzero digit separately, with addition signs between them

ex: 209.315

two hundred nine and three hundred fifteen thousandths

200 + 9 + 0.3 + 0.01 + 0.005

Comparing & Ordering Decimals

- 1. Compare the whole number portions of the numbers. If they are different write > for greater than or < for less than.
- 2. If the whole numbers are the same, compare each digit to the right of the decimal point, one at a time until you find digits that are different. (If necessary, add zeros at the end of a decimal.)

13 = 13

13.7 = 13.7

13.70 < 13.74

So, 13.702 < 13.74

Round the number 21,498.2536 to the nearest indicated place. 21. thousandth 19. tenth 20. hundred 22. one 24. hundredth 26. ten-thousand 23. thousand 25. ten Complete the chart below. Standard Form Expanded Form **Word Form** 27. 28. 3.962 30. 29. 100 + 2 + 0.0931. 32. Five thousand six hundred eighty-five and twelve hundredths 34. 33. 8,770.006 35. 900 + 10 + 4 + 0.3 + 0.02 + 0.008 37. 38. Two thousand nine and thirty-five thousandths Compare each pair of numbers by writing <, >, or = in the provided circle. 40. 4!. 42. 39. 0.13 90.13 24.13 24.130 15.906 0.046 9.52 15.96 43. 44. 45. 46. 7.256 0.964 6.83 6.825 7.24 32.9 3.290 Order the numbers from least to greatest. 47. 6.86, 6.8, 7, 6.9, 6.827 48. 12.03, 1.2, 12.3, 1.203, 12.301

Adding & Subtracting Decimals

Write the problem vertically, lining up the decimal points

ex: 12.8 - 1.52

Add zeros, if necessary

12.80

Add or subtract the numbers as if they were whole numbers

1.52

Bring the decimal point straight down

Multiplying Decimals

- Write the problem vertically with the numbers lined up to the right (decimals do NOT need to be lined up)
- ex: 3.24 x 0.8
- Ignore the decimal points and multiply the 2. numbers as if they were whole numbers
- $\begin{array}{c} 3.24 \longrightarrow 2 \text{ decimal places} \\ 0.8 \longrightarrow 1 \text{ decimal place} \end{array}$ 3 decimal places 2592
- Count the total number of decimal places in the two factors and put a decimal point in the product so that it has that same number of decimal places

Dividing Decimals

- Write the dividend under the division symbol and the divisor in front of the division symbol
- Move the decimal in the divisor after the number 2. and then move the decimal in the dividend the same number of places and bring it up
- Ignore the decimal point and divide as if whole 3. numbers
- If there is a remainder, add a zero to the end of the dividend, bring it down, and then continue dividing until there is no remainder

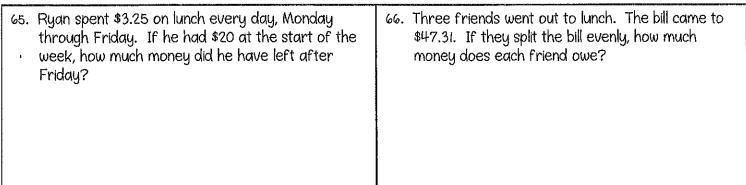

Find each sum or difference. Show your work.

	<u></u>		
49. 8.74 + 10.36	50. 37.4 – 8.55	51. 12.9 + 105,67	52. 450.89 – 213.33
,			
53. 24.1 + 3.74	54. 14.76 - 9.8	55. 622.85 + 53.49	56. 67 – 14.06

Find each product or quotient. Show your work.

58. 144.8 ÷ 4	59. 2.7 x 0.8	60. 6.2 ÷ 0.04	
,			
62. 15.8 ÷ 0.5	63. 14.8 x 0.12	64. 16.2 ÷ 1.2	
		•	

Solve each problem, showing all work.

Adding & Subtracting Fractions

- I. Rename the fractions to equivalent fractions with common denominators
- ex: $4\frac{4}{9} + \frac{2}{3}$
- 2. Add or subtract the numerators and keep the denominator the same
- $+ \begin{array}{cccc} 4\frac{4}{q} & \times \frac{1}{x} & \frac{4}{q} \\ & 2 & \times \frac{3}{3} & \frac{6}{q} \end{array}$
- 3. If mixed numbers, add or subtract the whole numbers

 $4 \quad \frac{10}{q} = \boxed{5 \frac{1}{q}}$

4. If possible, simplify the answer ε change improper fractions to mixed numbers

Multiplying Fractions

- Turn a whole number into a fraction by giving it a denominator of I
- ex: $6 \times \frac{2}{3}$

2. Cross-simplify the fractions if possible

- $\frac{1}{5} \times \frac{3}{5} = \frac{1}{4}$
- 3. Multiply the 2 numerators and the 2 denominators

= 4

4. If possible, simplify the answer $\ensuremath{\varepsilon}$ change improper fractions to mixed numbers

Dividing Fractions

- Turn a whole number into a fraction by giving it a denominator of I
- ex: $12 \div \frac{1}{2}$
- 2. Keep the 1st fraction the same, change the division symbol to multiplication, and flip the 2nd fraction to its reciprocal
- $\frac{12}{1} \div \frac{1}{2}$

3. Multiply the 2 fractions

- $\frac{12}{1} \times \frac{2}{1} = \frac{24}{1} = \boxed{24}$
- 4. If possible, simplify the answer \mathcal{E} change improper fractions to mixed numbers

Find each sum or difference. Show your work.

67. $\frac{7}{8} + \frac{5}{6}$	68. $\frac{9}{10} - \frac{1}{2}$	69. $\frac{3}{11} + \frac{2}{3}$	70. $\frac{11}{12} - \frac{13}{18}$
71. $4\frac{5}{q} + 7\frac{1}{3}$	72. 12 9 - 9 3 7	73. $3\frac{3}{5} + 2\frac{3}{4}$	74. 2 2 - 1 2 3

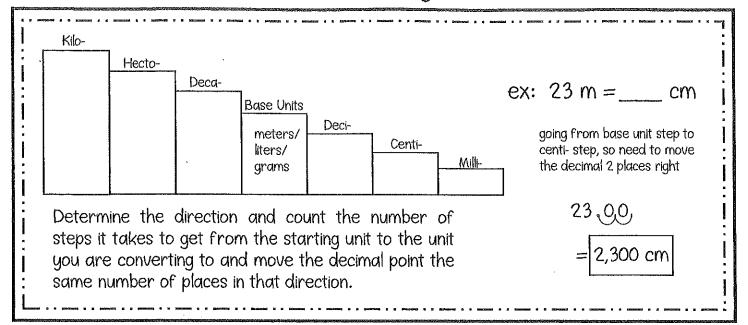

Find each product or quotient. Show your work.

75. $\frac{1}{6} \times \frac{3}{4}$	76. $6 \div \frac{1}{3}$	77. I5 x $\frac{2}{3}$	78. $\frac{1}{2} \div 3$
	,		
79. 1/6 × 10	80. 4 ÷ 2	81. $\frac{5}{9} \times \frac{3}{20}$	82. 4 ÷ 1 5
	1	7 20	Ü

Solve each problem, showing all work.

83. Jacqui ran 1 $\frac{1}{2}$ miles on Monday, Wednesday, and Friday and $\frac{3}{4}$ mile on Tuesday and Thursday. How far did she run in all?	84. Tyrell gave 3 packs of baseball cards to his friends. He gave each friend 1/3 of a pack. How many friends got baseball cards?

The Metric System

The Customary System

Length	Weight	Capacity
1 ft = 12 in 1 yd = 3 ft	1 lb = 16 oz 1 T = 2,000 lb	1c = 8 floz 1pt = 2 c
1 mi = 5,280 ft	11 - 2,000 10	1 pt = 2 c 1 qt = 2 pt 1 gal = 4 qt
		1 gal = 4 qt

To convert from a larger unit to a smaller unit, multiply. To convert from a smaller unit to a larger unit, divide.

ex:
$$18 c = ___ pt$$

cubs are smaller units of measure than pints, so need to divide

$$18 \div 2 = 9 \text{ pints}$$

Volume

Volume is the number of cubic units inside a figure.

Volume of Rectangular Prism = length x width x height

Volume of Irregular Figure: count cubic units

ex: find the volume 4 cm 10 cm

$$V = 4 \times 10 \times 5 = 200 \text{ cm}^3$$

Convert each Metric measurement. Show your work.

or-	1 d I was	
85.	1.9 km =	m

86.
$$23 g = mg$$

87.
$$350 \, \text{ml} =$$
____kl

89.
$$6 \text{ cm} = \underline{\hspace{1cm}} \text{m}$$

$$90. 35 \, \text{ml} =$$
_____l

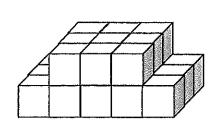

Convert each Customary measurement. Show your work.

91.
$$48 \text{ in} = ____ \text{ft}$$

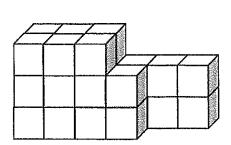

94.
$$1.5 \text{ mi} = ____ \text{ft}$$

Find the volume of each figure. Show your work.
